SAI PRASHANTH S P

+91 9025758221 ◇ Bengaluru, KA

saiiprashanth23@gmail.com ◇ Website ◇ Itch.io ◇ Github ◇ LinkedIn

OBJECTIVE

Aspiring Technical Artist with a strong foundation in both 3D art pipelines and scripting. Seeking to bridge the gap between artists and programmers by developing efficient workflows, troubleshooting asset integration and ensuring artistic vision is achieved within technical constraints.

EDUCATION

Bachelor of Science - Gaming, Jain University, Bengaluru 2022 - 2025

Grade 12 (CBSE) - Science Stream (PCMC), Amrita Vidyalayam, Coimbatore 2020 - 2022

SKILLS

Programming Languages	C++, C#, Python, Lua, Unreal Blueprints
Shaders & VFX	HLSL/CG, Shader Graph, Particle Systems, Post Processing
Game Engines	Unity3D, Unreal Engine
3D & Animation	Maya, 3DS Max, SpeedTree, World Machine, Substance Suite
Performance & Profiling	RenderDoc, Unity Profiler
Software & Tools	Git, JIRA, ComfyUI, Microsoft Office Suite
Graphics & Media	Photoshop, Illustrator, Premiere Pro

Specialities: Shader Development, Real-Time VFX, Pipeline & Tool Automation, Game Assets Modelling Workflows, Custom Animation Systems, Procedural Environment Art, Mobile Performance Optimization, Generative AI Workflows, Technical Documentation

RELEVANT EXPERIENCE

Game Developer Intern Apr 2023 - Dec 2023

Dnnovate Technologies *Remote, Pune*

- Collaborated with artists and designers to ensure seamless art to engine integration for mobile platforms, aligning assets with both visual targets and technical constraints.
- Developed and maintained custom editor scripts and pipeline tools to automate repetitive art tasks, accelerating content iteration cycles.
- Managed version control via Git and optimized asset pipelines, successfully improving build stability and performance.
- Integrated third party and monetization SDKs into the game loop, ensuring seamless ad delivery without disrupting player experience.

PROJECTS

Shader Portfolio. Waterfall Shader, Interactive Grass Shader, Pixel Post Process Shader, Fire Shader.

VFX Portfolio. Hyperdrive Warp FX, Rain with Splash FX, Flipbook Smoke FX, Friction Spark FX.

Custom Render Engine (Ongoing). Developing a custom low level render engine from scratch using the OpenGL API to master explicit memory management and hardware accelerated rendering pipelines.

Hungry Kirby. Engineered 2D rope physics using procedural link generation to create complex puzzles inspired by Cut the Rope. Developed a responsive character animation system where the protagonist reacts dynamically to idle time and player interactions.

Neko Gambit. Designed a stylized 3D chess experience with dynamic environmental effects, powered by a custom Minimax AI with Alpha-Beta pruning to drive strategic enemy decision making.

Bumble Bee. Developed a Minecraft style voxel environment with procedural flower spawning and terrain generation. Implemented a finite state machine (FSM) for enemy Wasp AI to handle patrol and chase behaviors dynamically.

Astron. Prototyped a physics based shooter using simple geometric primitives without game engine, implementing vector based movement and collision detection systems from scratch.

Decipher. Served as the Technical Artist and Level Designer, implementing scene optimizations and culling strategies to maintain stable framerates without sacrificing visual fidelity or gameplay depth.

Real-time Scene Profiler. Unity Editor tool reporting per-mesh triangle counts, total scene budget, material counts and LOD coverage in real time to catch heavy assets before they hit performance targets.

Texture Toolkit. Unity Editor tool supporting channel packing with custom R/G/B/A source remapping, texture atlas generation, and bulk import setting edits for compression, mip and wrap settings across multiple textures.

Asset Validator. Unity Editor tool that enforces naming conventions, checks polygon counts against configurable budgets, and flags assets missing required LOD levels automatically on import.

Automated LOD & Asset Integration Tool. Python tools for 3ds Max automating LOD generation at custom reduction tiers and FBX export to UE5 with Unreal compatible axis/unit settings, folder creation and texture setup.

Spline Tool. Unity Editor tool for scattering and aligning meshes along spline paths, enabling rapid layout of repeated environment elements such as fences, road barriers and cobblestone paths.

CERTIFICATIONS

- Unity Certified Game Developer Certification (Candidate, Est. Apr 2026)
- Michigan State University - Game Design and Development
- Epic Games - Game Design
- Google Project Management Professional Certification
- Agile with Atlassian Jira

ACHIEVEMENTS & HONOR

- **University Gold Medalist:** Awarded for securing the highest academic rank in Jain University.
- **Google Play x Unity Game Developer Scholar:** Chosen from a competitive pool of thousands to receive mentorship and exclusive guidance.
- **Research Author:** Presented original research at the International Conferences (ICRDSTEM).
- **Finance Awards:** Earned performance accolades from AMCs such as HDFC, ICICI, Kotak for excellence in portfolio management.
- **Sports Achievements:** National Level Champion in Karate and State Level Player in Badminton.

EXTRA-CURRICULAR ACTIVITIES

- **Open Source Contributions:** Contributed to G-Helper (Asus Utility Tool) and Kindle (Amazon) modding communities to optimize hardware performance and enhance user experience.
- **Industry Community Member:** Active participant in IGDC & GAFX forums, engaging with professionals to stay updated on evolving production pipelines and workflows.
- **Community Welfare:** Facilitated academic support for underprivileged students through Mentorship. Led a public initiative to secure critical road infrastructure, mobilizing ward signatures to bypass bureaucratic hurdles and negotiate directly with the State Authorities.
